EDUCATION

Florida International University

December 2025

BS Computer Science, 3.6 GPA, Dean's List

Selected Coursework: Programming (I and II), Discrete Structures, Data Structures and Algorithms, Computer Architecture, Systems Programming, Software Engineering, Artificial Intelligence

Google Tech Exchange Program, Spring 2025

Coursework: Applied Data Structures, Product Management, Software Engineering

SKILLS

Programming Languages: Java, C++, Python, C, C#, JavaScript, HTML/CSS, SQL

Technologies: Node.js, React.js, SQL, Git, Wix, Excel, Tailwind CSS, Vercel, Firebase, Vue.JS, .NET

WORK EXPERIENCE

Microsoft

May 2025 - July 2025

Software Engineering Intern

- Developed robust licensing flow simulation system using C++ and React.JS to create comprehensive mocks for the M365 licensing team, enabling safer testing and development, leading to 150% productivity increase.
- Integrated Windows operating system APIs for file operations and registry key management to enable realistic system-level mocking capabilities on all Windows-OS devices.
- Implemented secure access controls through cross-team collaboration by working with security teams to establish a new security group that restricted project access to Microsoft employees only, ensuring proper governance and compliance for the licensing mock system.

Airia

June 2024 – Aug 2024

Software Engineering Intern

- Orchestrated the integration of Agile methodologies within the team, enhancing sprint planning and retrospective s, which led to a 30% improvement in overall project completion rates and heightened team accountability.
- Helped a team of 6 other individuals to craft a custom prompt engineering workbench using React.JS and Tailwind CSS for the front end, incorporating the backend with .NET and C# to enhance prompt engineering workflow.
- Developed python scripts to incorporate JSON formatting to capture chats completed with OpenAI's chat completion API to refine prompt responses, leading to enhanced prompt testing efficiency.

PROJECTS

Passports | React.JS, Google Gemini, OpenAI, Express.JS, Node.JS

- Collaborated with a cross-functional team of 10 engineers to during Microsoft's Intern Hackathon week to develop a travel planning app in under 4 days, integrating OpenAI and Google Gemini APIs for itinerary generation.
- Engineered a custom agent pipeline that scraped and parsed 100+ Seattle-area deals from the Passport app, enabling AI-driven itineraries tailored to budget, accessibility, and interests.
- Delivered 50+ different travel plans in testing, dynamically adjusting pricing and activities using real-time inputs.

FitGram (Full Stack) | Streamlit, Google's BigQuery, VertexAI

- Created a community-based workout tracking platform leveraging Streamlit to implement 4+ custom pages.
- Architected and maintained a comprehensive database system using Google BigQuery, consisting of 6 interconnected tables that efficiently managed workout metrics and user profile data.
- Developed 8+ SQL scripts to store and retrieve user information, including posts, user profiles, and user workouts.
- Integrated Google's VertexAI to develop an intelligent feedback system to give personalized recommendations based on 6+ performance metrics on previous user workouts.

DevBuds (Full-Stack) | React.js, Tailwind, PostgreSQL, Next.js, Vercel

[DevBuds](#)

- Engineered a developer focused social media app with 15 other members, architecting the front-end with React.js and Modular CSS to bring developers together for projects.
- Leveraged Tailwind CSS to achieve a 48% faster CSS bundling process, resulting in streamlined user experience.
- Employed PostgreSQL for database management to ensure efficient data organization and retrieval.

Personal Portfolio | React.js, Node.js, TypeScript, CSS, Vercel

- Created a full-stack web portfolio leveraging node pack manager to implement 8+ custom components.
- Leveraged React.js and Modular CSS to create 5+ different pages, showcasing skills and projects to viewers.
